SUBJECT INDEX

Diffusion (surface)
  anomaly near structural phase transitions 301-310
    critical dynamics, surface at reconstruction 302-304, 305
    diffusion coefficient evaluation 304-310
      friction tensor in 306-310
  on lattices with local distortions 267-301
    microscopic theory, on substrates with local distortions 273-281
      adiabatic potential distortion in 27, 274-278
      centered rectangular 273-274
      diffusion anistrophy in 278-280
      W(110) surface 274-278, 279, 280, 281
    two-step gas model: H/W(100) and O/W(110) 269-273
      diffusion anistrophy in 269-270, 272-273
      generalization model for 270-273
    two-step gas model, Monte Carlo simulation studies 281-301
      adatom-adatom interactions 289-300
        collective diffusion tensor 298-300
        tracer diffusion tensor 293, 295-296
        transition probabilities in, 291-293
        results, 300-301
      hardcore interactions only 282-289
        collective diffusion 282-284, 285
(hardcore interactions, cont.)
        tracer diffusion, 282, 287, 288, 290
      microscopic theories of 240-250, 310-311, 313-314
    tensor derivation in 241-250
      analytic solution for special symmetries 249-250
      basic Hamiltonian and variables 241-244
      density and memory function 246-249
      inverse friction expression 244-246
  studies of
    experimental 235-239
      collective 237-239
      tracer 236-237
    problems in 239-240
    theoretical 231-235
  summary 310-314
    adatom motion in quantum regime 314
    finite coverage effect 314
    microscopic theory 310-311, 313-314
    randomness problem 312-313
    relaxation of adatom vibrational excitation 313-314
  universal features of 250-263
    on lattices with different symmetries 252-263
      rectangular, centered 254-260
      rectangular, simple 260-263
      square 252-254
    second-order friction expansion 263-267
      centered rectangular results 266-267, 268

(second-order friction, cont.)
friction expansion in 264-265
matrix elements in 265
memory function in 264-265
rationale for 263
square lattice results 266
tensor calculation in 265-266
temperature limits 250-251

Faceting and roughening
diffraction measurement in 105-106
of equilibrium crystal shape
entropic step-step interactions 69-70
theory of 68-70
thermodynamic description of 68-69
impurities and 111
on metals
Ag(100) 109-111
Cu(110) 109, 110
roughening and
equilibrium crystal shape and (ECS) 105
on Si(111)
azimuthal faceting 109
diffraction profiles in 106-107
measured phase diagram for 108-109
reconstruction transition effect and 107-108
Foams and thin films
drainage models for 125-130
film radius effect on 129-130
Marangoni-Gibbs effect and 125-126
mobility of surfaces and 127, 128
surface tension gradient effect in 127, 128
velocity of thinning in 126-127
foams
critical thickness of 124, 125
deformation of 132
drainage time and surface tension of 123-125

(foams, cont.)
dependence on sodium lauryl sulfate 124-125
lifetime of 123
rheology of
surface rheological properties and 131-135
stability of
surface rheological properties and 130-131
structure and stability of 121-123
viscosity of, dilatational 132-134
bulk foam and 134-135
expansion rate and 135
interfacial viscosities 132
surface viscosity and film thickness 132-133
lifetime of 123
microinterferometric investigation of micellar solutions
color interference in 138-139, 140
disjoining pressure in 139, 140
findings in 136
free excess energy in 139, 140
stratification in 136-138
capillary pressure and 140, 141
order/disorder transition in 139
stabilization and 142-143
stability of
ordered microstructure formation and 135-143
thin film lifetime
interactive forces and 135-136
from oil effect in aqueous systems 148-149, 150
stabilization of 142-143
thin films in
evolution of 22, 120-121
three-phase foams
oil effects in aqueous systems 143-150
on drainage 146-147

(three-phase foams, cont.)
drop size and 148-149, 150
emulsified oil behavior and 145-146
on film thickness transitions 145, 146
pseudoemulsion film formation 144-145, 146
stabilizing and destabilizing 148, 150

Low-energy electron diffraction (LEED). See also Tensor LEED
limitations of 6-7, 31, 41

Melting
ion scattering studies of 100-105
on Al(110) 104
on Pb(110) 101-104, 112
on Pb(111) 104-105
theory of 79-81
problem in 79
problem resolution in 79-81

Photoinduced reactions at SC surfaces 158-218
etching systems
SI with Cl_2 213-217
bulb studies of 215-216
doping dependence 216-217
fluence regimes 213-214
Si with XeF_2 209-213
excitation mechanisms in 159-179
bulk substrate-mediated 162-166
band-edge carriers in 164-165
energetic carriers in 163-164
optical heating and 165-166
direct optical
adsorbate 161-162
ambient species 159-161
numerical consequences 171-178
band-edge carriers in 172-176
energetic carriers in 171-172
(numerical...cont.)
surface heating 176-179
surface effects 166-169
band bending 168-169
surface recombination 168
surface states 166-168
metal deposition systems 197-198
carbonyls 188-195
photochemical reactions
$Cr(CO)_6$/Si(111) 190-195, 193, 194
$Mo(CO)_6$/Si(111) 190-191, 192
photochemical reactions 190-195
photothermal reactions 189-190
$Mo(CO)_6$/Si(100), 190
surface chemicals and 188-189
metal alkyls reactions 195-199
on clean SC surfaces 195-196
on native oxide surfaces 196-198
model systems 179-187
CO/Si 187
NO/GaAs 187
NO/Si(100) 187
NO/Si(111)
cw illumination, high coverage 180-182
pulsed illumination, high coverage 185-187
pulsed illumination, low coverage 182-184
oxidation systems 198-209
GaAs 205-209
1 ML films 205-207
condensed adsorbate 207-209
thin film growth 207
silicon 205-209
1-2 ML oxide growth 200-202
thick film growth 202-205
thin film growth 202

Roughening transition 67-69
high temperature effects on 97-100
anharmonicity 97-98

(high temperature...)
intensity decays 98
surface expansion 99-100
vibration enhancement 99
solid-on-solid models, 70-74
body-centered 72-74
discrete Gaussian 71-72
restricted 76-78
stepped, on (11m) surfaces 73-74
studies of 81-105
on (110) fcc metals 89-97, 112
Ag(110) 91-92
AU(110) 93
critical temperatures of 89
Cu(110) 90-91, 92
Ni(100) 91-92
physisorbed systems 96-98
Pt(110) 93-94
reconstructed 93-96, 112
topological defects in 94-95
unreconstructed 90-93
diffraction techniques in 81-83
on (11m) fcc metals 83-88, 112
Cu(113) 85-86
kink formation energy and 83-84, 87-88
Ni(113) 85-88
terrace step kink model 74-76
theory of 70-78
ECS and 70

Surface roughening, melting, faceting 65-112. See also Faceting; Melting; Roughening

Tensor LEED
advantages of 6-7, 45, 46
applications to disordered surfaces
W(100) 27-28, 29
W(100)-O 28-30
direct methods and 48-57
barriers to 49
generalized 53-57
comparison of intensities and 55-56

(direct...generalized, cont.)
Oed coefficient matrices in 53-55
Pendy approach 56-57
heavy atom method 49-50
linear 51-53
theory and 50-51
formal development of 7-19
cluster corrected 19-20
linear LEED in 9-15. See also Low-energy electron diffraction
vs. x-ray diffraction 8-9
future of 57-58
global vs. local R-factor minima and 47-48
LEED limitations and 6-7, 31
search strategies with, automated 31-48
β-SiC(100), c(2x) reconstruction 40-42, 44
ethylene decomposition and 42, 43
Si sublimation and 43-44
convergence in
Pd(111) 34-35, 36
Pd(111)-CO surface 37-39
development of 31
full dynamical LEED calculation in 31, 32-33
Mo(100)-c(2x2)-C 39-40
Mo(100)-c(2x2)-S 39-40, 41
numerical optimization in 31, 32-34
theory of 15-19
angular momentum basis in 15, 16
comparison of tensor approximation and dynamical calculation 18
computational advantage of 17, 19
translational theorem in 16
validity of 21-27
comparison with full dynamical methods and 20-22
convergence of 23-27

(validity, cont.)
R factor comparisons in 26, 27

Ultra-high vacuum electrochemistry (UHV-EC), single-crystal electrode surfaces
electrochemical double layer studies 383-392
aqueous/metal, cryogenic coadsorption 383-386
emersed, direct surface characterization 386-392
emersion process 371-378
electrochemical double layer and 371-372
emersed 375-378
electrolyte film thickness and, residual 373-375
faradic reactions, spontaneous 378
experimental aspects 329-366
functions of 420
fundamental considerations in 366-382
gas-solid interfacial studies
environment-dependent variations and
in atomic order and electronic structure 367-369
in molecular chemisorption mode 370-371
in surface potential 370
instrumentation aspects of 360-365
cleanliness verification in 365-366
crystal attachment to single sample manipulator 362
crystal transfer to two manipulators 363
crystal transfer to single sample manipulator 363
electrode arrangement in 364-365
electrode transfer between manipulators 362
selection and preparation of 360-361, 363-364
interfacial characterization in 333-360

(interfacial..., cont.)
electrochemical 357-360
coulometry in 359-360
voltammetry in 357-359, 360
UHV-based 333-357
AES 341-344
LEED 335-338, 339
RHEED 338, 340-341
surface crystallography by angle-resolved XPS and AES 349-353
surface spectroscopy with low-energy electrons, 329-333
XPS 344-349
XPS and AES 349-353
thermal desorption techniques 354-357
TDMS or TPD 354-357
work function measurements in 353-354
molecular adsorption studies 405-420
group IB electrodes 408-409
group VIII electrodes
alkyenes 411-412, 413
amino acids 420
carbon monoxide 409-420
homocyclic aromatic compounds 412-416
N-hetero aromatic compounds, 418-420
thiophenes and thiophenols 416-418
solvent-electrode interactions
water 406-407
nonaqueous solvents 407-408
perturbations from evacuation and surface analysis 378-382
compositional changes and 379-380
surface characterization and 379-380
work function, polycrystalline AU 378-379
preparation of surfaces for 329-333
annealing in
electrochemical 332
thermal 331-332

(preparation, cont.)
crystallographic orientation in 330-331
rationale for 327-329
studies of 382-420
underpotential electrodeposition studies 392-405
electrodeposition, compounds SCs 403-405
hydrogen adsorption at Pt 393-395
monolayer metal electrodeposits 396-403

(monolayer metal...cont.)
in absence adsorbed anions 400-402
comparison, admetal in vacuum and solution 402-403
at halide-treated surfaces 398-400, 401
UHV-based 333-357

XPS (x-ray photoelectron spectroscopy)
